

If you want to upgrade your old iOS for 1G, 2G, 3G 4G... or you want to get free apps from App providers such as App Time Machine or Cydia, you need to upgrade your IPOD or IPHONE iOS using [Whited00r](#) modified iOS.

You can read more about Whited00r [here](#) .

Here I will show you how to upgrade your 1G IPOD iOS1 (1.3.1) to iOS3 (3.1.3) and be able to download and install Apps from Time Machine. These instructions can be duplicated to upgrade later iOS for 2G, 3G IPOD, IPHONEs and IPADs.

1. Download the required [Whited00r iOS](#) from Whited00r. I have downloaded [Whited00r 6.0 iOS](#) for IPOD Touch 1G.

2. Extract the all folder files from the zip file, you will see a .ipsw file. In my case it the IPOD Touch1G_WD6.ipsw, this is the upgrade for the IPOD

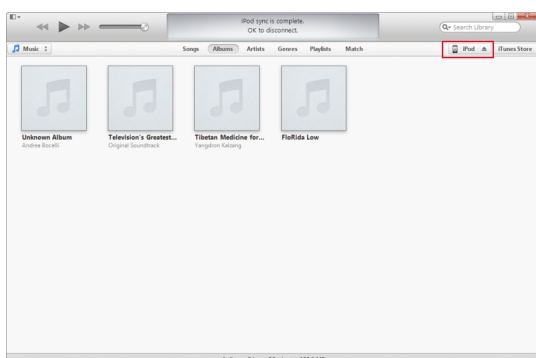

2. Download and install iTunes. iTunes can be downloaded [here](#) .

3. Connect the IPOD to the PC or MAC

Written by Administrator

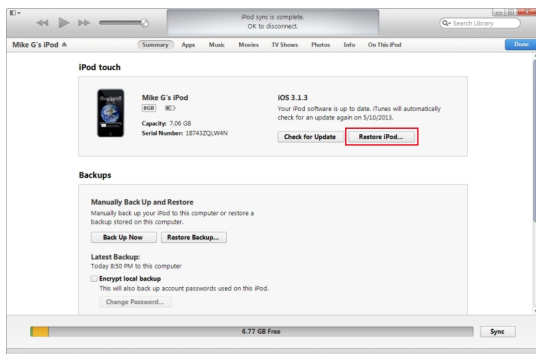

4. Launch iTunes and access the iPOD

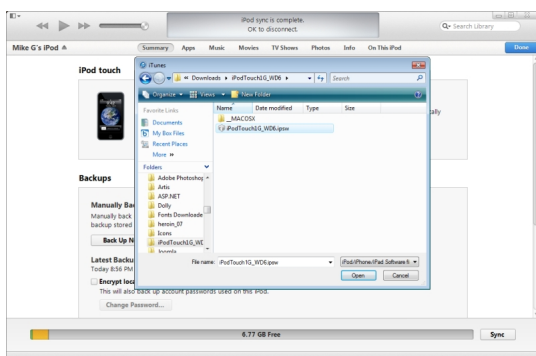

Written by Administrator

5. On a PC: hold down the SHIFT key and click Restore iPod...

6. On the next window navigate to the extracted iPod Touch1G_WD6.ipsw file and click open.

Written by Administrator

7. Install the Whited00r iOS on the IPOD. This may take upto 30 minutes, do not unplug the IPOD until the installation is complete.

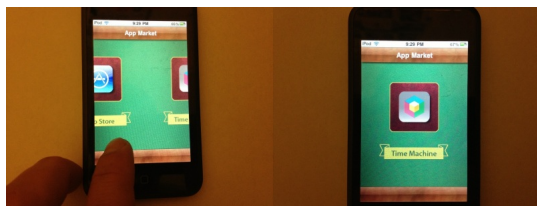

8. Once the IPOD has been updated to iOS3 you will see the new OS with default Apps.

9. Unlike the Apple iOS you will see an App for App Market.

10. Open App Market this allows you to download Apps from App store or scroll left to access Time Machine or Cydia. Most or all Apps in these sites are free, download, install and enjoy.
