

- On the start menu search for Internet Information Services (IIS) Manager

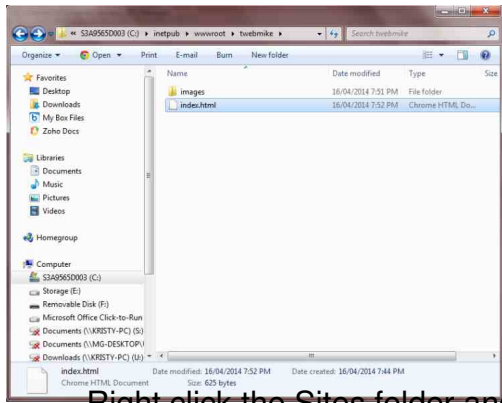

Note* you must have IIS enabled on your computer to run your website

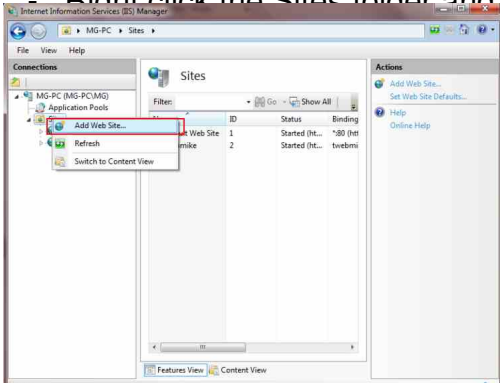

- Create your website in any location on your computer. However the best recommended location is usually `C:\inetpub\wwwroot`
- Create your website folder in `wwwroot`. e.g. call it `twebmike`
- Place your html files or website files inside `twebmike`. Note you must have one `index.html`, `index.htm`, `default.htm`, `default.asp`, `iisstart.htm` or `default.aspx` as your start page of the website.

My Easy PC we are here to help you... - Creating a website in IIS

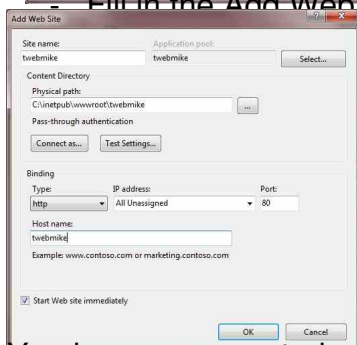

Written by Administrator

Right click the Sites folder and click on Add Web Site...

Fill in the Add Web Site.. form with all details. Example is shown below. Click OK

Your details created a new website accessible from <http://localhost/twebmike/>
