

A denial-of-service (DoS) or distributed denial-of-service (DDoS) attack is an attempt to make a machine or network resource unavailable to its intended users.

A DoS attack generally consists of efforts to temporarily or indefinitely interrupt or suspend services of a host connected to the Internet. Typical target sites or services hosted on high-profile web servers such as banks, payment gateways, and even root nameservers.

Open command prompt, enter: `ping 185.54.224.11 -t -l 65500`

185.54.224.11 being the IP address of the website.
