

My Easy PC we are here to help you... - Magento checkout progress not working

Written by Administrator

If during the Magento check out process the you can't seem to progress past the Shipping Method and the side bar check progress is not showing, follow the below instructions to fix it.

This applies up to Magento 1.9 version as I just used this to fix my shopping cart.

Search and find the payment.phtml file in you app folder usually to contained in yourshoppingcartappdesignfrontendbasedefaulttemplatecheckoutonepage.

Open the payment.phtml

Find the code:

```
<fieldset >
```

```
<?php echo $this->getChildHtml('methods') ?>
```

```
</fieldset>
```

And edit to:

```
<fieldset id="checkout-payment-method-load">
```

```
<?php echo $this->getChildHtml('methods') ?>
```

```
</fieldset>
```

this fieldset needs an ID to progress. This should fix the problem. If required be sure to clear all your cache.
